Riddhesh Khedekar

AI/ML Engineer

London, UK | +44 7823 711367 | riddheshkhedekar13@gmail.com | LinkedIn | GitHub | Portfolio

Professional Summary

AI/ML Engineer with an MSc in Data Science and experience in machine learning, AI model development, and data analytics. Skilled in Python, Pandas, NumPy, and Scikit-learn, with experience in data preprocessing, feature engineering, model training, and performance evaluation. Proficient in analysing datasets, optimising model performance, and applying statistical techniques to support data-driven solutions. Experienced in AI project research, data preparation, model evaluation, and developing data-driven solutions to address technical requirements.

Education

Master of Science (MSc) in Data Science | University of Greenwich, UK | 2024 – 2026

Bachelor of Engineering (BE) in Information Technology | Atharva College of Engineering, India | 2018 – 2022

Skills

Programming & Data Analytics: Python | Pandas | NumPy | SQL | Data Collection | Data Cleaning | Data Preprocessing | Data Transformation | Exploratory Data Analysis (EDA) | Data Visualisation | Statistical Analysis | Dataset Preparation | Matplotlib | Seaborn | Power BI | JSON Data Processing | REST APIs | Jupyter Notebook | Git | Docker

Generative AI & Natural Language Processing: Generative AI | Large Language Models (LLMs) | Retrieval-Augmented Generation (RAG) | Natural Language Processing (NLP) | Text Processing | Text Generation | Speech-to-Text Processing | AI Model Integration | Embedding Models | Vector Databases

Machine Learning & Deep Learning: Machine Learning | Deep Learning | Supervised & Unsupervised Learning | Classification & Regression | Scikit-learn | PyTorch | TensorFlow | Model Development & Training | Model Evaluation | Model Validation | Model Selection | Hyperparameter Tuning | Overfitting & Underfitting | Model Performance Metrics | Precision, Recall & F1-Score | Feature Engineering | Computer Vision | Object Detection | Image Processing

Professional Experience

AI Engineer | Internmo, Remote | Jun 2026 – Present

- Researched assigned AI projects, gathered relevant datasets and explored machine learning approaches to support model development, assessing model performance using precision, recall and F1-score.
- Prepared and transformed structured and unstructured data using Python, Pandas, and NumPy, including JSON processing and customer transaction data for model training and analysis.
- Developed machine learning models and supported customer-related transcript generation workflows, applying text processing and natural language processing (NLP) techniques to organise and analyse customer information.
- Containerised AI project environments using Docker, supporting consistent local setups, reproducible testing and smoother collaboration during model development.

Data & Analytics Engineer (Part-Time) | Seabed.AI, London, UK | Oct 2024 – Sep 2025

- Analysed and pre-processed a domain-specific dataset of approximately 7,000 images using Python-based data processing techniques and feature engineering to support computer vision and object detection development.
- Designed and trained deep learning models using PyTorch, applying image processing and model optimisation techniques to improve object detection accuracy from approximately 80–83% to over 87% on test datasets.
- Evaluated model performance through validation and testing, identifying prediction errors and refining model configurations to improve object detection reliability.
- Collaborated with technical stakeholders using Git and Agile workflows, documenting experimental findings and supporting reproducible model development and testing.

Python Automation & Performance Test Engineer | QualityKiosk Technologies, Mumbai, India | Jun 2022 – Jul 2024

- Engineered Python-based automated testing frameworks for banking, insurance, and fintech applications, supporting performance testing of websites and REST APIs under simulated workloads of over 20,000 concurrent user requests.
- Investigated application performance datasets using SQL, JMeter, and Grafana, identifying API latency and response-time bottlenecks and contributing to a 25% improvement in web service response times.
- Produced real-time performance visualisations and Power BI dashboards, transforming technical logs and testing metrics into actionable insights for engineering teams and supporting data-driven performance analysis.

Certifications

- Citi ICG Technology Software Engineering Job Simulation | Forage | 2024
- Deloitte Data Analytics Job Simulation | Forage | 2024
