

Riddhesh Vilas Khedekar

Software & Data Engineer | Python · SQL · Machine Learning · Cloud

London, UK | riddheshkhedekar13@gmail.com | +44 7823 711367 | [linkedin.com/in/riddhesh-khedekar](https://www.linkedin.com/in/riddhesh-khedekar) |

PROFESSIONAL SUMMARY

Software and Data Engineer with 2+ years of commercial experience building high-performance automation frameworks, machine learning pipelines, and data-driven applications in banking, insurance, and AI research. Proficient in Python, SQL, and PyTorch, with a proven track record of improving system response times by 25%, maintaining sub-3-second SLAs at 20,000+ concurrent users, and delivering object detection models at 85%+ accuracy. Seeking a software or data engineering role where robust engineering and applied ML intersect.

TECHNICAL SKILLS

Languages	Python (advanced), SQL (advanced), R, Java (familiar), React, Javascript
Frameworks & Libs	PyTorch, Scikit-learn, Pandas, NumPy, FastAPI, Joblib
ML / AI	Logistic Regression, Random Forest, CNNs, Transfer Learning, Feature Engineering, EDA
Data & BI	Power BI, Excel (advanced dashboards), ETL pipeline design, Statistical Analysis
Testing & QA	Apache JMeter (load/performance), Postman, Python test automation, API testing
Dev Tools	Git, Linux, Windows, macOS, VS Code
Soft Skills	Agile/Scrum delivery, stakeholder communication, cross-functional collaboration

WORK EXPERIENCE

Data & Analytics Engineer | Seabed.AI (University of Greenwich StEP Programme)Oct 2024 – Aug 2025

- Researched and analysed domain-specific sonar datasets to identify performance gaps in object detection models, directly informing the team's model development roadmap.
- Designed and validated a domain-adapted object detection pipeline in PyTorch using transfer learning; achieved 85%+ accuracy across held-out test sets, exceeding the project's target benchmark.
- Standardised data formatting conventions and processed data change requests end-to-end, significantly improving research reproducibility and enabling faster model iteration cycles.
- Collaborated with academic researchers and software engineers in an Agile environment, presenting findings at regular sprint reviews.

Software Test Engineer | QualityKiosk Technologies Pvt. Ltd.

Jun 2022 – Jul 2024

- Built and maintained Python-based automated test execution frameworks for core banking and insurance platforms, reducing regression cycle time and consistently achieving SLAs of <3 s (web) and <1 s (API).
- Designed and analysed performance testing strategies using Apache JMeter, simulating 20,000+ concurrent users; identified and resolved bottlenecks that improved overall application response time by 25%.
- Developed comprehensive load, stress, and endurance test suites covering REST APIs and web services, providing actionable reports to development teams across two major product lines.
- Created Power BI and Excel dashboards for insurance clients to visualise real-time performance metrics, accelerating root cause analysis and reducing incident resolution time.
- Worked closely with developers, product owners, and client stakeholders to translate business requirements into robust test plans and acceptance criteria.

PROJECTS

FASTag Fraud Detection System | Python, Scikit-learn, FastAPI, Joblib

- Built an end-to-end fraud detection pipeline covering data ingestion, preprocessing, class imbalance handling (SMOTE), model training, evaluation, and REST API deployment.
- Evaluated model performance using fraud-specific metrics — Recall, Precision, F1-score, ROC-AUC, and PR-AUC — optimised for high-recall requirements on an imbalanced dataset.
- Serialised the trained model and preprocessing pipeline with Joblib for production-grade reuse, ensuring consistent inference between training and serving environments.

EDUCATION

MSc Data Science – University of Greenwich, London, UK

Sep 2024 – Oct 2025

Relevant modules: Machine Learning, Deep Learning, Big Data Analytics, Statistical Modelling, Data Engineering.

B.E. Information Technology – Atharva College of Engineering, Mumbai, India

Aug 2018 – May 2022

CERTIFICATIONS

Deloitte Australia – Data Analytics Job Simulation (Forage)

The Complete Java Developer Course – Udemey
